

Top 10 Reasons to use SecurTrac

DOMINO 12 READY

10. There is a regulatory compliance requirement to log all e-mail content and file attachments that are sent and received by e-mail users in HCL Domino.
 9. File attachments sent via HCL Notes e-mail must be securely delivered using secure download links and with use of verification codes ensuring only intended recipients can download them.
 8. There is a need to log and be alerted whenever an ACL change occurs on all or specific databases.
 7. Real-time notifications must be sent when documents and/or design elements are modified.
 6. Compliance requirements dictate that monitoring all or part of the Domino Directory for changes must be logged and also provide the ability to rollback changes to a previous state.
 5. You must track notes.ini changes and have the ability to know what has changed and be able to rollback any of those changes.
 4. Intrusion control directives require that all illegal access attempts to data on HCL Domino servers be detected and reported to I.T. security automatically.
 3. I.T. Security mandates that all occurrences of bulk action events in Mail or Application databases must be logged for audit purposes.
 2. Regardless of what you choose to audit, SecurTrac Monitors can be easily configured and activated quickly in large Domino environments.
- Reason #1...SecurTrac is trusted by customers worldwide and has been securing Notes/Domino environments for almost two decades!
